

## EMSO Azores Measurement of Dissolved oxygen

Pierre-Marie SARRADIN

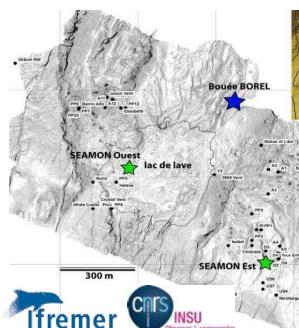

Best practices

Brest / 12<sup>th</sup> october 2018

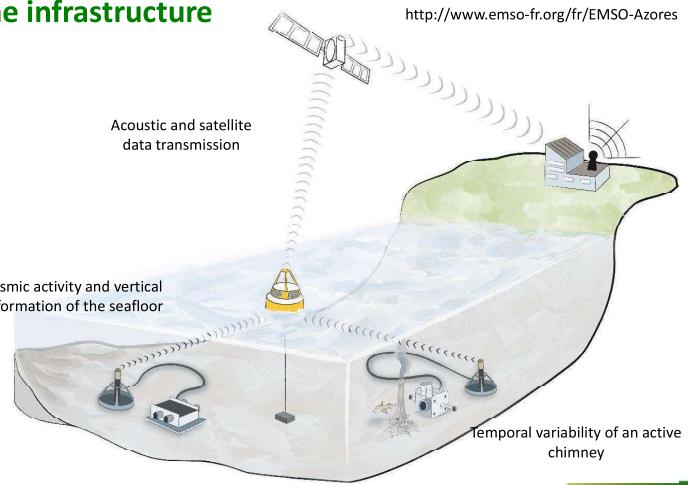

### The EMSO – Azores Node

Understand the links between geological, physical and chemical processes and their effects on the dynamics of the hydrothermal fauna at different spatial and temporal scales at the Lucky Strike vent field

### EMSO Azores – The infrastructure

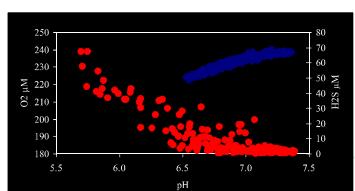

Data archiving in Brest  
<http://www.emso-fr.org/fr/EMSO-Azores>

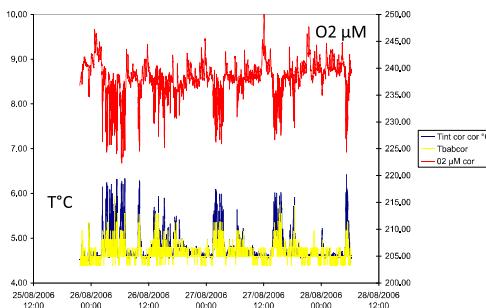

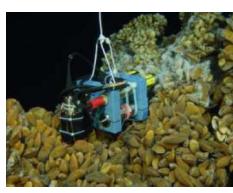

### The TEMPO module

- Habitat characterization and evolution of a mussel assemblage
- Oxidic / anoxic transition area
- Temperature gradient

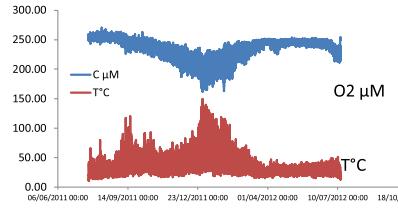

## Oxygen measurement Anderaa Optode

Optode 3830  
Localised microchloration against fouling  
Measurement period 30 sec  
2 autonomous T probes

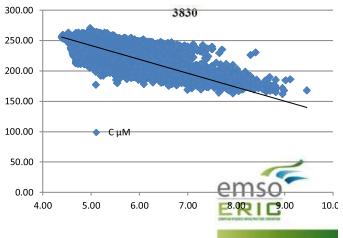

## Observatory data - July 2011 to July 2012

From 2011 to 2016  
Laboratory calibration 2 points 0 and 100%  
(no availability of fully calibrated optodes)

### Too large dispersion of the data

- Limit of the temperature correction in a dynamic environment
  - Response time of the O<sub>2</sub> and Temperature sensors
  - Lag between the 2 sensors
- Work in progress ... Cathalot, Laes et al.

## Data valorisation

High-resolution dynamics of a deep-sea hydrothermal mussel assemblage monitored by the EMSS-Acacia/MarMAR observatory

- Only temperature data is used
- Or
- The trend is used

## SEAMON East and EGIM 2017-

- Calibrated optodes 4831
- <https://doi.org/10.17882/56501>
- Sensor data sheet
- Sensor test and specification
- Oxygen calibration report

## SEAMON East and EGIM 2017- ...

### New objectives

- Water column dynamics
- Oceanography mooring
- CTD deployments
- Winkler analysis
